3. Lab Exercises

In the course there are three mandatory lab exercises. These labs are rather extensive and for them to be meaningful and for you to pass you need to prepare. Except for the first lab, there are mandatory home problems, which you should be able to present at the start of the laboration. The second lab exercise starts with a short test, and you must answer the questions correctly to be allowed to participate in the laboration. No laboratory reports need to be written. Lab manuals are sold at KF-Sigma.

The labs are performed during the hours 8.15–12.00, 13.15–17.00 or 17.30–21.15. They are not included in the schedule from the LTH schedule generator. The lab facilities are on the bottom floor in the M-building. You need to sign up to do the lab. Signup lists are available on the course home page, see

http://www.control.lth.se/Education/EngineeringProgram/FRT010_FIPi.html

The signup lists are open from the first week of the course. If you are unable to attend the lab you should report this to the administrators or lab responsible. Persons that have

missed signing up in time or been absent from a lab without proper cause will have to do the lab the next time the course is given. This is however often already in the next study period, since the same labs are used for most other programs.

Exercise 7 is a computer exercise and booked in the same way as the labs. This exercise is not mandatory, though highly recommended, and the booking is only to even out the load between the groups.

Lab	When	Signup deadline	Responsible
1	week 2–3	week 1	Gabriel Ingesson
2	week 4–5	week 3	Fredrik Ståhl
3	week 6–7	week 5	Christian Grussler
Ex. 7	week 3	week 3	Bo Bernhardsson

The week number refers to "week in the course".

4. Interactive Computer Tools

In order to facilitate the learning and understanding of some of the concepts used in the course there are interactive computer tools available for free download from

aer.ual.es/ilm/

The module *Modeling* is suitable for studying model descriptions. At exercise 7 you have the opportunity for supervised use of this module in our lab facilities.

5. Piazza.com

We will try out the tool Piazza during the course, mainly for online discussion, questions and answers. The signup link is piazza.com/lu.se/spring2015/frt010

6. Literature

The course is covered by 4 compendia sold by KF:

Reglerteknik AK – Föreläsningar (Lectures)
Reglerteknik AK – Exempelsamling (Exercises and solutions)
Reglerteknik AK – Laborationer (Lab manual)
Reglerteknik – Formelsamling (Collection of formulae)

The last three compendia are also available for free download at www.control.lth.se. You are allowed to use the 'Formelsamling' on the exam.

For those interested in more reading we recommend Glad & Ljung: *Reglerteknik — Grundläggande teori* (Studentlitteratur 2006), Lennartson: *Reglerteknikens grunder* (Studentlitteratur 2002), or Åström & Murray: *Feedback Systems: An Introduction for Scientists and Engineers* (Princeton 2008), available for free at www.cds.caltech.edu/~murray/amwiki.

7. Exam

The written exam is 5 hours long. You may use 'Formelsamling', standard tables and calculators (not preprogrammed with e.g. Bode diagrams though). The grades are: fail, 3, 4 or 5.

The exam is on Monday March 16, 14–19 at Victoria stadium..
